

UIAA Safety Label

UIAA is the only global developer of International Standards for climbing and mountaineering equipment

UIAA Standards specify the requirements for well-tested equipment and for good conformity assessment

UIAA Standards are implemented world-wide, regularly updated and aim to be the highest in the world

What are the UIAA standards?

The UIAA develops international standards that ensure vital features such as quality, safety, reliability, efficiency and effectiveness. Its standards distil an international consensus from the broadest possible base of stakeholder groups.

Expert input comes from the closest of the needs for the standards and also to the results of implementing them.

UIAA: New Developments

- Implementation of new standard on “Braking Devices”
- Increased funding for research projects by Safety Commission Working Groups
- Easy administration of Safety Label Certification through online tool
- Project initiation to simplify understanding of Safety Standards

The standardization system

The UIAA grants a Safety Label to all equipment that is tested according to its standards

Currently, there are more than 50 Safety Label Holders that subscribe to UIAA Safety Label Certification.

Safety Commission meeting 2010

All existing and new Safety Label Holders are invited to an exciting and productive Safety Commission meeting in 2010.

The meeting will take place from 2-4 June 2010 in **Belluno, Italy** and hosted by UIAA member association, CAI (Club Alpino Italiano)
