

Recall Via Ferrata Set Date March 13th 2013

Issued by UIAA

- All Via Ferrata sets using the rope-friction technology, which are affected by the recent recall, are listed based on the manufacturer's data.
- All sets with elastic lanyards that are affected by the recall from August/September 2012 are also listed. Sets which had already been exchanged by a manufacturer because of a recall are not concerned again.
- Do not use any affected set! The worst case is a rupture of the set.
- All details can be found on the manufacturers' homepages.
- The maximal recommended lifespan of Via Ferrata sets as specified by the manufacturers is also included in the list. By the end of this time sets have to be disposed of – with frequent use or visible damage earlier. A Via Ferrata set must be disposed of after one fall.
- **Only continue to use your Via Ferrata set if it is not affected by any recall and if it is within the lifespan specification of the manufacturer.**

Manufacturer Link	Recalled Via Ferrata Set		Maximal Lifespan for Via Ferrata sets as specified by manufacturer and past recalls
	Type: Elastic Lanyards (August/September 2012)	Type: Sets using rope-friction technology (February 2013)
